## *Annual Operating Report*

***ECA 3-1119-95-006 Issued December 20, 1995***

***January 1, 2024 – December 31, 2024***

Prepared by the Ontario Clean Water Agency  
For The Corporation of the Township of Macdonald, Meredith and Aberdeen Additional

## **SECTION 1: INTRODUCTION**

The Ontario Clean Water Agency (OCWA) acts as the operating authority for the Echo Bay wastewater treatment. This document is prepared by OCWA in accordance with Certificate of Approval (CofA) #3-1044-95-006. The report is required to include the following information:

- (i) A summary of all monitoring data including an overview of the success and adequacy of the sewage treatment program;
- (ii) A comprehensive interpretation of all monitoring data and analytical data collected relative to the works during the reporting period and a comparison to the effluent quality and quantity criteria described in condition 1;
- (iii) A summary of any effluent quality assurance or control measures undertaken in the reporting period;
- (iv) A summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming a part of the works;
- (v) A description of any operating problems encountered and corrective action taken during the reporting period;
- (vi) A summary of any proposed alteration, extension or replacement in the process or operation of the works to be completed over the next reporting period which may require approval under the *Ontario Water Resources Act*;
- (vii) A tabulation of the volume of sludge generated in the reporting period, and an outline of anticipated volumes to be generated in the next reporting period;
- (viii) An outline of the proposed sludge handling methods and disposal areas to be utilized over the next reporting period; and
- (ix) A summary of the calibration and maintenance procedures conducted on all monitoring equipment

## **SECTION 2: Description of Facility**

Capacity of Facility: 734 m<sup>3</sup> / day (average flow)

Service Area: Town of Echo Bay

Service Population: 530

Effluent Receiver:

Major Process: Rotating Biological Contactor

Facility Classification: Wastewater Class 2

Collection Classification: Collection Class 2

## **SECTION 3: Executive Summary**

Sampling parameters were **not exceeded** during the 2024 reporting period.

The total effluent discharge from the Sewage Treatment Plant for the year was **90,288.60 m<sup>3</sup>**.

The total raw sewage flow into the Sewage Treatment Plant for the year was calculated to be **90,288.60 m<sup>3</sup>**.

## **SECTION 4: Process Data**

The facility operator collects samples of raw sewage and sends them to an accredited laboratory for analysis. Raw flows are calculated using flow meter values.

Raw (Influent) Sampling					
Parameter	Frequency	Method	Results		
			Min	Avg	Max
BOD <sub>5</sub> (mg/L)	Monthly	24hr Composite – External Analysis (Lab)	52	87	141
TSS (mg/L)	Monthly	24hr Composite – External Analysis (Lab)	31	62	100

Flow (m <sup>3</sup> /d)	Daily	V-Notch Flow Meter	108.5	246.7	814.9

The facility operator collects effluent samples and sends them to an accredited laboratory for analysis. Depending on the parameter, samples are collected on a weekly or monthly basis and are collected by a composite sampler or by taking a grab sample.

Treated (Effluent) Sampling		
Parameter	Frequency	Method
CBOD <sub>5</sub> (mg/L)	Monthly	24hr Composite – External Analysis (Lab)
BOD <sub>5</sub> (mg/L)	Monthly	24hr Composite – External Analysis (Lab)

E.Coli	Weekly	24hr Composite – External Analysis (Lab)
pH	Weekly	Grab – Internal Analysis
Temperature	Weekly	Grab – Internal Analysis
Alkalinity	Monthly	24hr Composite – External Analysis (Lab)
TKN	Monthly	24hr Composite – External Analysis (Lab)
Nitrite	Monthly	24hr Composite – External Analysis (Lab)
Nitrate	Monthly	24hr Composite – External Analysis (Lab)
Unionized Ammonia	Monthly	24hr Composite – External Analysis (Lab)
TAN	Monthly	24hr Composite – External Analysis (Lab)
Flow	Daily	Equal to Raw Flow Rate

Compliance limits are based on monthly discharges for effluent concentrations and effluent loadings. In addition, the effluent is essentially free of floating and settleable solids and does not contain oil or other substance in amounts sufficient to create a visible film or sheen or foam or discolouration on the receiving waters.

## Daily Raw Flows

Year	Total Raw Sewage Flow m³/d	Avg Day Sewage Flow m³/d	Max Day Sewage Flow m³/d	Avg Day % of Rated Capacity 734 m³/d
2024	90,288.6	246.7	814.9	34%
2023	94,913.7	260.0	846.3	35%
2022	98,402.6	269.6	1,152.6	37%
2021	83,048.6	227.5	830.7	31%
2020	106,262.1	290.33	1,119.7	40%

The average flows measured into the sewage treatment plant did not exceed the specified average daily flow of 734 m<sup>3</sup>/day in 2024.

The average daily flow for 2024 is 246.7 m<sup>3</sup>/d which is approximately 34% of the rated capacity. The highest recorded peak flow occurred in February (846.3 m<sup>3</sup>/d) and was approximately 111% of the average rated capacity, however the peak flow rate specified in the ECA is 1,418 m<sup>3</sup>/d. The highest recorded flow was 57% of the peak flow rating.

The total raw sewage flow into the Sewage Treatment Plant for the year was calculated to be **90,288.6 m<sup>3</sup>**.

The total effluent discharge from the Sewage Treatment Plant for the year was **90,288.6 m<sup>3</sup>**.

The average concentrations for CBOD, TP, and BOD were all within the compliance and objective limits specified in the facility ECA. Average concentration/objective limits were exceeded for E.coli and objective limits were exceeded for TSS. In November, E.coli exceeded the limit with a geo mean of 564.78 cfu/100ml. In December, a high result of 17 mg/L for TSS brought it above the objective limit of 11 mg/L.

The operator did not observe a visible film, sheen, foam or discolouration on the receiving waters nor did he notice floating or settleable solids.

To ensure objective and compliance limits are met, in-house tests are conducted by licensed Operators using Standard Methods. The data generated from these tests are used to determine the treatment efficiency while maintaining process control. All in-house monitoring equipment is calibrated based on the manufactures recommendations. Alum is also used to help lower TSS and TP values.

The monitoring data and analytical test show that the facility is capable of producing high quality effluent. Throughout the reporting period, the flow of sewage into the sewage treatment plant did not exceed the maximum flow of 1,418m<sup>3</sup>/day at any period of time. Nor did it exceed the annual average flow of 734 m<sup>3</sup>/day. All average loadings for the above parameters were well within compliance limits. All pH values remained within the range of 6.0 to 9.5 at all times.

## **SECTION 5: Facility Upsets & Non Compliances**

The E.coli geometric mean density for the month of November exceeded the limit prescribed in the facility's ECA with an average of 564.78 CFU/100mL.

## **SECTION 6: Maintenance**

Plant maintenance is monitored using a Work Management System (WMS). All monitoring equipment maintenance and calibrations are performed on a monthly basis or as per manufacturer requirements. Flow meter verifications are completed annually; records are maintained on site and electronically on the OCWA Hub server. Maintenance and verification reports are attached as [Appendix A](#). Any major maintenance can be found in the table below.

<b>Work Order</b>	<b>Completion Date</b>	<b>Comment</b>
4194965	October 2024	Sewer line flushing – Section completed includes: West of highway 17b and the entire Bay street, including the Lake street lift station

For the next reporting period, there are no proposed alterations, extensions or replacements in the process or operation of the works.

A total volume of 340 m<sup>3</sup> was removed from the Echo Bay WPCP in 2024 and was disposed of at the Hilton Beach Landfill. It is expected that the volume of sludge generated over the next reporting period will be equivalent to the volume generated in 2025.

## **SECTION 9: Additional Information**

There is no additional information to provide for 2024.
