
Save on Energy Business Programs

About The Programs

The Save on Energy Small Business Programs offer local businesses a variety of ways to improve their operational energy efficiency, reduce overall energy consumption, and make their business more comfortable for customers and employees.

These programs offer a range of rebates and upgrade opportunities designed for your business size and needs.

Peak Perks Program

Participants in Peak Perks save with their smart thermostats by participating in brief, time-limited thermostat adjustments during periods of peak electricity demand that can occur on the hottest summer days.

Participants receive a $75 electronic prepaid MasterCard when they enroll in Peak Perks. You'll also receive a $20 electronic prepaid MasterCard for each additional year you remain enrolled.

Small Business Program

This program is designed to help small businesses across Ontario make no-cost equipment improvements to lower their energy consumption.

Your business can receive up to $3,000 towards lighting upgrades and $2,500 towards non-lighting equipment upgrades.

Retrofit Program

Through the Retrofit Program, your business can receive an incentive for the completion of several energy-efficient upgrades in lighting, heating, cooling and ventilation, manufacturing/process equipment and other equipment.

Eligible projects are generally those that provide sustainable, measurable and verifiable reductions in peak electricity demand and electricity consumption. Project incentives are available for a variety of products and technologies to help businesses save on energy costs and increase their competitiveness.

Instant Discounts Program

Receive upfront discounts from participating distributors on the purchase of energy-efficient lighting products that will help to lower your business's energy consumption, improve your bottom line, and transform your space.

XLerate Program

The XLerate Program is a streamlined, pay-for-performance initiative that provides industrial, municipal, institutional, and healthcare sectors with a simplified approach to undertaking large-scale energy-efficiency projects.

Expanded Energy Management Program

The Expanded Energy Management program provides funding for industrial, commercial, and institutional facilities to improve energy efficiency through the hiring of an energy manager, implementation of an energy management information systems, strategic energy management coaching, or free training opportunities.

Energy Performance Program

The Energy Performance Program rewards customers who are able to make behavioural and operational changes that support capital investment projects, enabling them to grow their energy savings year over year.

The program is based on a pay-for-performance model that encourages whole building energy performance improvements.

Existing Building Commissioning Program

The program offers financial incentives to commercial building owners to hire qualified commissioning providers to undertake building recommissioning at their facilities, helping them realize energy savings from improved facility operations and maintenance business practices.
