Save on Energy Residential Programs

About The Programs

Through the province's Save on Energy programs, residents can access programs and incentives designed to assist with energy efficiency, managing energy usage, and providing rebates to make it all more achievable.

Since 2011, Save on Energy programs have provided energy opportunities and resources to over 400,000 homes and businesses in all sectors across Ontario to help them better manage their electricity use and increase their energy efficiency.

Peak Perks Program

Participants in Peak Perks save with their smart thermostats by participating in brief, time-limited thermostat adjustments during periods of peak electricity demand that can occur on the hottest summer days.

- Peak Perks events will occur only on weekdays for up to three hours during periods of peak demand for electricity. Events will not take place on weekends or holidays.
- Events can occur up to 10 times between June and September.
- Prior to an event, your thermostat may be adjusted down slightly to pre-cool your home so that you remain comfortable while an event is taking place.
- During an event, your thermostat will be automatically adjusted between two to four degrees Celsius to reduce your home's energy consumption.
- You are always in control – you will be notified when an event occurs and can opt out at any time during an event
- Once an event ends, your thermostat will return to its original temperature setting.

Participants receive a **$75** electronic prepaid MasterCard when they enroll in Peak Perks.
You'll also receive a **$20** electronic prepaid MasterCard for each additional year you remain enrolled

Energy Affordability Program

The Energy Affordability Program provides support to income-eligible electricity consumers. The program can help you better manage your electricity usage and increase your home comfort.

You may be eligible to receive different energy-saving products and services, including:

- A free home energy needs assessment conducted by a trained energy professional to identify energy-efficient upgrades available for your home, such as the replacement of inefficient appliances, draft proofing, and professionally-installed insulation. These upgrades may be installed during or after an in-home visit.

- Free energy-saving kits customized to meet your energy needs. Your kit could include energy-saving LED lighting, timers, faucet aerators and/or a clothes drying line. All expert advice and energy-saving home upgrades under this program are completely free of charge.

Home Renovation Savings Program

The Home Renovation Savings program was designed to help Ontarians improve home energy efficiency and comfort.

Homeowners can choose to complete a rebate eligible home energy assessment and bundle up their upgrades, or skip it and complete single upgrades.

Get rebates on upgrades such as heat pumps, insulation, smart thermostats, and more!

Ready To Get Started?

Visit saveonenergy.ca/foryourhome to see all the programs, check your eligibility, and to start your home energy efficiency journey!
